

EXHIBIT D

EXHIBIT D

Asserted Claims of U.S. Patent No. 6,023,683

3. An electronic sourcing system comprising:

at least two product catalogs containing data relating to items associated with the respective sources;

means for selecting the product catalogs to search;

means for searching for matching items among the selected product catalogs;

means for building a requisition using data relating to selected matching items and their associated source(s);

means for processing the requisition to generate one or more purchase orders for the selected matching items; and

means for converting data relating to a selected matching item and an associated source to data relating to an item and a different source.

26. A method comprising the steps of:

maintaining at least two product catalogs on a database containing data relating to items associated with the respective sources;

selecting the product catalogs to search;

searching for matching items among the selected product catalogs;

building a requisition using data relating to selected matching items and their associated source(s);

processing the requisition to generate one or more purchase orders for the selected matching items; and

determining whether a selected matching item is available in inventory.

28. A method comprising the steps of:

maintaining at least two product catalogs on a database containing data relating to items associated with the respective sources;

selecting the product catalogs to search;

searching for matching items among the selected product catalogs;

building a requisition using data relating to selected matching items and their associated source(s);

processing the requisition to generate one or more purchase orders for the selected matching items; and

converting data relating to a selected matching item and an associated source to data relating to an item and a different source.

29. The method of claim 28 further comprising the step of determining whether a selected matching item is available in inventory.
